PAPER FOR FLOWERS AND PLANTS

At WeGreen, we produce paper cones made from recycled paper, ideal for protecting your plants and ensuring perfect thermal insulation during periods of extreme heat or intense cold

The transportation of plants from the store to home is a delicate and risky moment. The plant is exposed to significant changes and weather conditions that can be highly traumatic. Currently, most competitors do not offer an eco-friendly and practical solution for product protection.

Ease of Handling: Paper cones, together with the multistand and our Pack25 system, are practical, easy to use, and handle, offering a simple and functional solution.

Natural Appearance: Paper often symbolizes eco-sustainability and environmental respect. Packaging made of paper not only protects plants but also conveys values of harmony with nature, aligning with your principles.

Our cones are made from recycled paper with a weight of 40 g/m², resistant to humidity, ensuring durability and practicality. All materials are sourced from FSC and PEFC-certified suppliers, guaranteeing the sustainability of the

WHY DO WE USE PAPER?

Environmental Sustainability: Paper is a biodegradable and recyclable material, naturally decomposing without leaving harmful residues in the environment. In contrast, plastic materials can take hundreds of years to degrade, contributing to plastic pollution, one of the major global environmental threats.

Plant Protection: Paper is a breathable material that promotes proper ventilation and temperature regulation during plant transportation.

CUSTOMIZE YOUR BRAND

In addition to the classic versions in white and colored paper, we offer the option to customize cones with a wide range of colors or tailored branding to perfectly match your business's image. Personalize your products with your logo to enhance your store or garden corner.

Printing options include flexographic printing in 1 or 2 colors.

Wrapped cones

GLOSS LINE

Coated white paper ideal for highlighting prints, ensuring maximum performance in resistance and weight-bearing capacity.
