

OUR ROOTS
OUR FUTURE
OUR COMMITMENT

SUSTAINABILITY GROWS WITH US

WE USE PAPER CONES
TO PROTECT
OUR PLANTS

A lush forest scene with a waterfall and sunlight rays filtering through the trees. The image is a full-page background for a text-based advertisement. It features a dense forest with a waterfall in the foreground. Sunlight rays are visible, creating a magical atmosphere. The text is overlaid on the right side of the image.

WE USE PAPER CONES TO PROTECT OUR ENVIROMENT

For over **20 years**, we have been refining the craft of sustainable paper packaging. We design products that are not only functional and versatile, but also environmentally responsible. Sustainability is deeply rooted in everything we do — from the choice of raw materials like recycled paper and grass fiber, to the care we put into each stage of production. This commitment defines not only our products, but who we are as a company. We take our responsibility seriously, striving every day to reduce our environmental impact and contribute to a more conscious, circular future

WE WRAP PLANTS
WE UNWRAP A GREENER FUTURE
EVERY CONE COUNTS

WE PRACTICE RESPONSIBILITY IN ALL AREA OF OUR BUSINESS

We proudly design and produce all our paper cones exclusively in Europe, with a high level of vertical integration. This allows us to significantly reduce transport distances and emissions, as we prioritize local sourcing whenever possible. Short supply chains and conscious choices define our way of working — always with the environment in mind.

Our commitment to sustainability goes beyond materials and production: it includes people. We believe in building a responsible, forward-looking company, which is why we continuously invest in our technologies, our facilities, and — above all — our people.

A large part of our team is made up of women, and we actively promote inclusivity, care, and equality in the workplace. This, for us, is what true sustainability looks like: reducing environmental impact while supporting a more inclusive and resilient future — in Europe, and beyond..

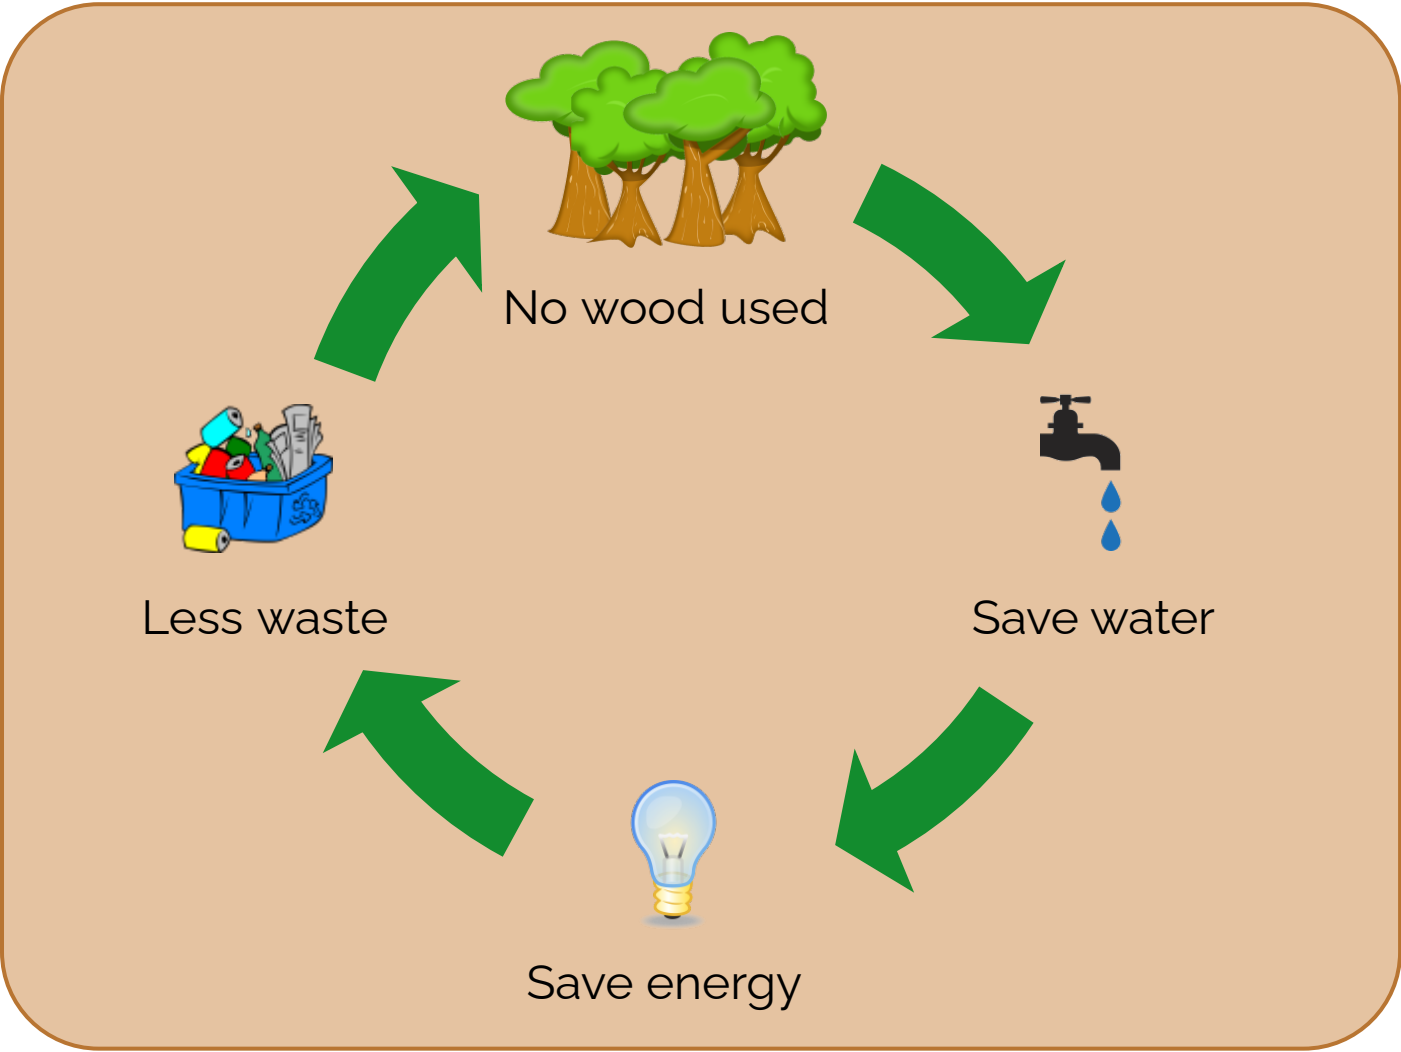

GRASS AND RECYCLED PAPER
INSTEAD OF PULP OR PLASTIC
**AN OBVIOUS CHOICE FOR
A SUSTAINABLE FUTURE**

CERTIFIED SUSTAINABILITY

RECYCLED PAPER

MATERIALS

Choosing recycled paper helps preserve forests by reducing the demand for fresh pulp

Opting for recycled paper reduces the environmental footprint of production. Compared to virgin paper, It uses up to **70% less water**

Produces **fewer greenhouse gas emissions** and Minimizes **waste** by giving new life to used paper materials.

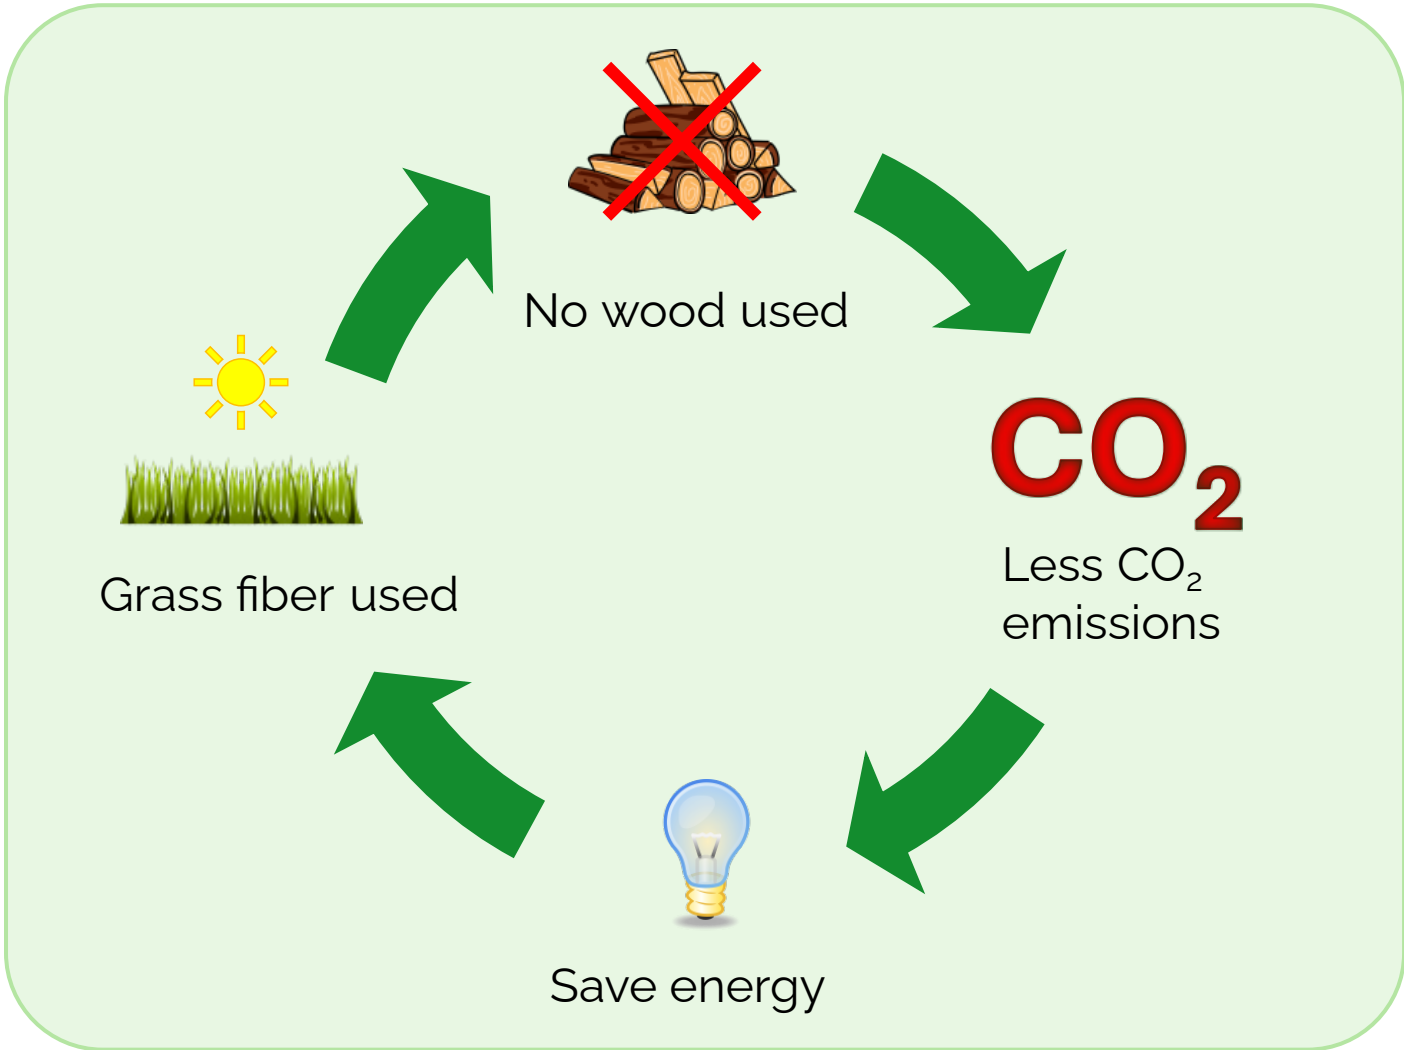

- ✓ Our paper cones are crafted using materials exclusively sourced from **FSC® and PEFC-certified suppliers**, reflecting our commitment to environmentally responsible and sustainable
- ✓ Our paper cones made of recycled paper can **be recycled as usual**.

CERTIFIED SUSTAINABILITY

GRASS PAPER

MATERIALS

Grass fiber processing requires up to **99% less water** than traditional wood pulp production, making it an extremely water-efficient alternative.

Grass fibers are mechanically processed without chemicals, **reducing energy usage** by up to **80%** compared to conventional paper manufacturing

Grass paper production emits up to **75% less CO₂** than conventional paper, thanks to short transport and low processing temperatures

- ✓ Our paper cones are crafted using materials exclusively sourced from **FSC® and PEFC-certified suppliers**, reflecting our commitment to environmentally responsible and sustainable
- ✓ Our paper cones made of recycled paper can **be recycled as usual**.

A close-up, high-contrast photograph of the layers of a corrugated cardboard box. The image shows the characteristic wavy, fluted structure of the material, with light brown and tan layers creating a rhythmic, textured pattern. The lighting highlights the edges and creases of the cardboard, giving it a three-dimensional appearance.

WE USE ONLY THE BEST
MATERIALS
OVER AND OVER AGAIN
